Pinnacle Alloys E111T1-K3M

AWS CLASS E111T1-K3M

CODE AND SPECIFICATION DATA:

AWS A5.29 ASME SFA 5.29; UNS W21331

DESCRIPTION:

Pinnacle Alloys E111T1-K3M has a nominal composition (wt-%) of 2 Ni, 2 Mn, 0.5 Mo. These electrodes are used on many high-strength applications with steels having yield strengths of 100ksi and higher. Typical applications would include crane fabrication, trailer construction, and other structural applications involving higher strength materials. Filler metals of this classification are used to weld materials such as HY-80, HY-100, HSLA-80, ASTM A 514, and similar high strength steels. Preheat and interpass temperatures are typically kept between 275-325°F. This filler metal is used in the as welded condition.

NOTICE: The results reported are based upon testing of the product under controlled laboratory conditions in accordance with American Welding Society Standards. Actual use of the product may produce different results due to varying conditions. An example of such conditions would be electrode size, plate chemistry, environment, weldment design, fabrication methods, welding procedure and service requirements. Thus the results are not guarantees for the use in the field. The manufacturer disclaims any warranty of merchantability of fitness for any particular purpose with respect to its products.

CAUTION: Consumers should be thoroughly familiar with the safety precautions on the warning label posted in each shipment and in the American National Standards A49.1, "Safety in Welding and Cutting," published by the American Welding Society, 8669 NW 36 Street, #130, Miami, FL 33126: OSHA Safety and Health Standards 29 CFR 1910 is available from the U.S. Department of Labor, Washington, D.C. 20210.
